Business-Driven Software Development (BDS) is Net Objectives' proprietary integration of Lean-Thinking with Agile methods across the business, management and development teams to maximize the value delivered from a software development organization. Net Objectives has built a reputation and track record of helping organizations achieve their development improvement goals through an integrated use of Lean, Kanban, Scrum, SAFe™ and our own proprietary methods.

Our approach goes beyond the first generation of Agile methods such as Scrum and XP and the 2nd generation method of Kanban by including the entire value stream of development. Lean-Thinking enables product portfolio management, release planning and critical metrics to create a top-down vision while still promoting a bottom-up implementation.

We help our clients integrate business, management and teams which allows Agile success at scale. Popular Agile methods, such as Scrum, tend to isolate teams from the business side and seem to have forgotten management's role altogether. The Kanban Method tends to ignore the importance of teams and the technical nature of software development. These are critical aspects of all successful organizations. In BDS:

Business provides the vision and direction; properly selecting, sizing and prioritizing those products and enhancements that will maximize your investment.

Teams self-organize and do the work; consistently delivering value quickly while reducing the risk of developing what is not needed.

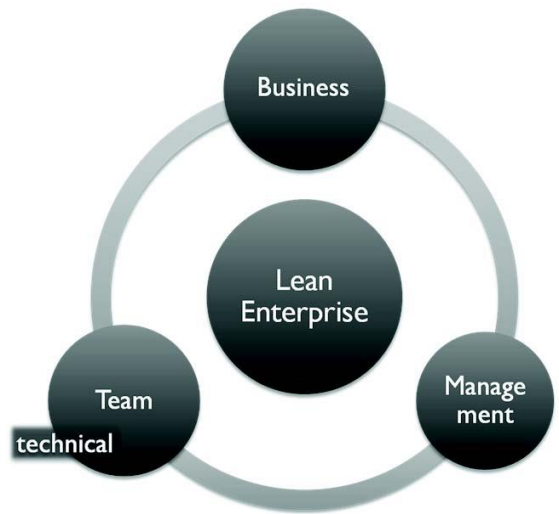

Management bridges the two; providing the right environment for successful development by creating an organizational structure that removes impediments to the production of value. This increases productivity, lowers cost and improves quality.

Become a Lean-Agile Enterprise

All levels of your organization will experience impacts and require change management. We help prepare executive, mid-management and the front-line with the competencies required to successfully change the culture to a Lean-Agile enterprise.

Prioritization is only half the problem. Learn how to both prioritize and size your initiatives to enable your teams to implement them quickly.

Learn to come from business need not just system capability. There is a disconnect between the business side and development side in many organizations. Learn how BDS can bridge this gap by providing the practices for managing the flow of work.

Why Net Objectives

Net Objectives is the only consulting/training organization that has led the way in every Agile approach of the last 15 years. By being experts in Lean, Scrum, Kanban, SAFe™, XP, design patterns, ATDD, TDD, refactoring and more we can deliver what you need and not be limited by an often myopic offering. Our consultants have written several award winning books and average almost 3 decades of experience. Contact mike.shalloway@netobjectives.com to set up a free consultation.

SCALED AGILE (SAFe ET AL)

- SPC Training
- Leading SAFe with Net Objectives Extensions
- Coordinating Multiple Teams

ASSESSMENTS

See where you are, where you want to go, and how to get there

PRODUCTIVE LEAN-AGILE TEAM TRAINING

- Team training in Kanban, Scrum, Scrumban, XP, Scrum/XP
- Technical Training in ATDD, TDD, Design Patterns, Refactoring, Emergent Design

BUSINESS AND MANAGEMENT TRAINING
